RE: New York Racing Association, Civil Action No. CV-16-5442,
Aqueduct Racetrack – Quarterly Process Wastewater Report

FILE: 15049/68670

Dear **Mses. Feinmark and McEathron**:

In accordance with the above-referenced Consent Judgement and Decree (Decree), New York Racing Association, Inc. (NYRA) is pleased to present this Quarterly Process Wastewater Report covering the period between January 1 and March 31, 2018.

To facilitate your review, this report is organized as follows:

- Project Background
- Description of Activities
- Proposed Changes to Remedial Measures
- Summary of Plans, Reports, and other Submissions
- Description of Proposed Activities
- Identification of Noncompliance Issues
- Certification Statement

PROJECT BACKGROUND

NYRA operates the Aqueduct Racetrack located in Jamaica, New York. Process wastewater discharges to the facility's stormwater system associated with the racetrack's horse stabling operations are regulated under New York's State Pollutant Discharge Elimination System (SPDES) General Permit for Concentrated Animal Feeding Operations (CAFOs) and Section 301(a) of the federal Clean Water Act.

In September 2016, NYRA settled a Civil Action brought against it by the United States Department of Justice (USDOJ), on behalf of the United States Environmental Protection Agency (USEPA), as a result of violations of the Clean Water Act, specifically pertaining to the discharge of process wastewater to the storm sewer system (which leads to Jamaica Bay) without a permit.

The New York State Department of Environmental Conservation - Division of Water implements the National Pollutant Discharge Elimination System permit program in New York through its SPDES permit program. A SPDES permit establishes stringent performance-based standards and operating conditions that are designed to protect the state's waters. Aqueduct Racetrack's horse stabling operations previously discharged process wastewater, consisting primarily of horse wash water, to the stormwater system. NYRA has chosen to eliminate these process wastewater discharges to the stormwater system in lieu of obtaining a SPDES permit.

As required by the Decree, NYRA developed a Process Wastewater Elimination Plan (WEP), which identifies and documents the methods to be undertaken to eliminate the discharge of process wastewater to the storm sewer system. The WEP was approved by the USEPA on November 14, 2016. Section 4.2.1 of the WEP details the information that is required to be presented in each Quarterly Report. This information is presented below.

DESCRIPTION OF ACTIVITIES CONDUCTED

A description of process wastewater control activities conducted during this quarterly time-period included:

- Monnit Corporation (Monnit) wet sensors were operational during this period as required by Section 3.1 of the WEP. These sensors are connected to the internet and provide real-time notification (text and e-mail) to the NYRA facilities supervisor and two other facilities personnel when the sensors are triggered. This notification prompts these people to investigate if the condition is based on a precipitation event or an improper discharge of wastewater to the stormwater system. An example photograph of the sensor system installed in the southern catch basin is presented in **Attachment A**.

Sensors did malfunction from time to time as a result of harsh weather conditions and/or moisture entering the sensor housings. To improve performance of these sensors NYRA has recently purchased battery powered sensors, which are believed to be more resistant to moisture build-up when compared to the solar powered version. NYRA continues to swap out malfunctioning equipment with replacements on an as needed basis.

- Pump run-time meters were operational during this period as required by Section 3.2 of the WEP at the pump station, located immediately prior to the municipal stormwater system connection near the intersection of 114th Street and North Conduit Avenue. A pump run-time log was maintained during this period, which is presented in **Attachment B**.
- NYRA's Information Technology group posted weekly wastewater inspection forms and the prior quarterly process wastewater report on NYRA's environmental compliance webpage. (<https://www.nyra.com/aqueduct/about/environmental-compliance>)
- Thirteen weekly wastewater inspections were conducted within the stable and equipment building areas.

PROPOSED CHANGES TO REMEDIAL MEASURES

Changes to remedial measures are not proposed.

SUMMARY OF PLANS, REPORTS, AND OTHER SUBMISSIONS

Weekly wastewater inspections during the first quarter of 2018 were conducted within the barn and equipment building areas on these dates:

- January 5, 12, 19, 26

- February 2, 9, 16, 23
- March 2, 9, 16, 23, 30

Copies of inspection forms are presented in **Attachment C**.

DESCRIPTION OF PROPOSED ACTIVITIES

NYRA will continue to implement the WEP during the next quarterly period. Aqueduct ceased racing activities on April 24, 2018. Horses stabled at Aqueduct have now been moved to Belmont Park racetrack. Horses will not be present at this location with the exception of 1 or 2 horses that may be quarantined from time to time in the State Barn – Barn 11 until the new Aqueduct racing season starting October 2018.

IDENTIFICATION OF NONCOMPLIANCE ISSUES

Dry weather discharges and noncompliance issues with the WEP were not identified during this reporting period.

NYRA security provided a widespread presence during this time-period. Wastewater noncompliance issues that warranted summons were not observed.

CERTIFICATION STATEMENT

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Should you have any questions, please contact me or Mark Randazzo at (718) 659-2377 or gkozak@nyrainc.com and (781) 883-6432 or mark.randazzo@obg.com, respectively.

Pump Run-Time Logs

Pump 1

Instructions:

1. This log is to be completed on each working day (see example below).
2. In the event that the pump is operational during non-precipitation events, NYRA personal must investigate if there was dry weather flow, the source of the flow, and must eliminate the flow within 24 hours.

Date	Time (24-hr time)	Pump Run Time (hrs)	Total Run Time Since Last Inspection (hrs)	Has there been precipitation since last inspection? If so, describe.	Need for Additional Investigation? (Y/N)	Comments
